## Scratch Jr.

Coding is the new literacy! With Scratch Jr, young children (ages 5-7) can program their own interactive stories and games. Scratch Jr is a great platform to introduce children to block-based programming. It is a user-friendly code block-based programming platform that helps children to learn to solve problems, design projects, and express themselves creatively on the tablet.

They also use math and language in a meaningful and motivating context, supporting the development of early-childhood numeracy and literacy. With ScratchJr, children don't just learn to code, they code to learn.

CODING & ROBOTICS is an enrichment programme designed for preschoolers to focus on experiential learning.

Children are introduced to a different coding and robotics platform every term. Join us as we embark on new activities in each session!

PROGRAMME BENEFITS

1. Computational thinking

2. Logical reasoning skills

3. Block-based coding

4. Problem-solving

5. Teamwork
