age 4

Bee-Bot

The robot Bee-Bot is designed to be used by the younger children from 5 years old. It operates without the need of a tablet and its usage is very simple and pleasant. This educational robot teaches children the forms and colours but also to find their way in space. Bee-Bot is a perfect starting point for teaching control, directional language and programming.

Thus, collaboration among students, concentration, anticipation and memorisation of programs are solicited in the child, without realising that they are working on their learning.

is an enrichment programme designed for preschoolers to focus on experiential learning.

Children are introduced to a different coding and robotics platform every term. Join us as we embark on new activities in each session!

PROGRAMME BENEFITS

1. Computational thinking
2. Logical reasoning skills
3. Block-based coding
4. Problem-solving
5. Teamwork
